

Documentation - Level 3

What is a function?

A JavaScript function is a block of code that is executed when called, it can contain a parameter that will be set when the function is called.

```
<script>

  function add(x) {

    y = x + 5

    return y

  }

</script>
```

How to use the console?

The console tab is located next to the Elements tab.

Functions can be called in the console.

```
> add(10)
-> 15
```

What is JavaScript Obfuscation ?

JavaScript obfuscation is a way of securing code by encrypting it. In this way, a sequence of characters can be encrypted into numbers vice versa.

```
> String.fromCharCode(65)
```

```
-> 'A'
```
